

## COUNCIL MINUTES

February 16, 2026

The Archbold Village Council met in regular session on Monday, February 16<sup>th</sup>, 2026, at 5:30 p.m. in the Ruihley Park Pavilion with the following members present: Gary Dominique, Mike Evans, Kevin Eicher, Aaron Babcock, Chad Kern, and Karla Ball. Mayor Brad Grime opened the meeting and presided thereat.

There being no corrections to the minutes of the February 2, 2026 Council meeting, Kevin Eicher moved to approve, seconded by Mike Evans.

Roll: Yeas: Babcock, Kern, Ball, Dominique, Evans, Eicher

Nays: None. **Motion carried.**

Following a review of the list of bills and payroll totaling \$364,407.27, Chad Kern moved to approve, seconded by Gary Dominique.

Roll: Yeas: Ball, Dominique, Evans, Eicher, Babcock, Kern

Nays: None. **Motion carried.**

Council then reviewed and discussed the following Committee, Board & Department Reports:

- January 2026 Police Report
- January 2026 Fire & EMS Report
- January 2026 Fleet Report

**PUBLIC PARTICIPATION:** Mayor Grime opened the floor for public participation with logistical directions for addressing Council followed by a welcome and thanks to those present. He stated that no one has contacted the Village regarding the construction of a data center or for land annexation. Annexation and zoning requests are public knowledge, and the typical approval timeline is a three-reading process. Therefore, from an official standpoint, discussion would primarily center around a “non-proposed data center.” Mayor Grime encouraged public to stay informed using the Live Archbold app, thanked the local newspapers for their coverage, and then introduced the Council members.

Village Administrator Aaron Alt stated that he has been in communication with Luke Boyers and Austin Dunlap from Boyers Construction and Iron Ridge Development. He read a statement that they had prepared for the night’s meeting.

“In light of recent public discussion, we felt it was important to reiterate what was shared at last Monday’s township trustee meeting. Iron Ridge is not pursuing a data center project in Archbold. There are no plans, proposals, agreements or active discussions related to a data center. We understand the concerns that have been raised, and we respect the fact that people care deeply about the future of Archbold — we do too. We live here, work here and have long-standing relationships in this community. Iron Ridge is committed to responsible economic development and working collaboratively with Village leadership to support long-term job creation and business growth. Our focus will remain on manufacturing, warehousing and industrial opportunities that align with the values, character and long-term vision for Archbold. We are grateful to be part of this community and remain committed to supporting its future for the next generation.”

## COUNCIL MINUTES

February 16, 2026

Page 2.

Zach Bly and his family live on County Road B. He is a commercial project manager and visits data centers regularly. He thanked attendees, those who had not signed nondisclosure agreements (NDAs), and those who first brought attention to large land purchases and contracts. He also urged the public to do their own research. He shared that a FOIA (Freedom of Information Act) request had been filed and the records showed that one Council member had signed the NDA with Iron Ridge. He asked Councilman Gary Dominique to confirm if he, his family, his business or his place of employment had any relationship with the parties involved with the NDA. Councilman Dominique confirmed.

From Bly's own research, opinions, and experience in the industry, he then shared his findings on Iron Ridge Development and his concerns. Iron Ridge was founded approximately one year ago but no projects have been completed yet. Because of NDAs, they could not disclose information about their source(s) of funding. Public records show that one plot of land was purchased for \$25,000 an acre and additional land is under contract for \$50,000 an acre. It has been stated that there are no developmental plans or end users for the land purchased or contracted.

Bly shared his doubts that there is no plan in mind for land that was sold at such a high price. He critiqued Iron Ridge for their stated desire for transparency while utilizing NDAs and for strategic "wordsmithing." He is concerned by the similarity in circumstances to other communities with confirmed data centers being built. He said the current events are too much like the "playbook" that data centers use: NDAs signed, a developer acquiring large amounts of ground, rezoning if necessary, sale to a shell company that constructs the center, data center sold to the end user which is usually a large tech company. He also shared that a friend of his in the utility industry told him to research how data centers are being told to generate their own power using natural gas so as not to overwhelm the power grid and how the location of the purchased land has a natural gas line running through it.

Bly concluded with a ChatGPT experiment and a request of Council. He wanted to see if ChatGPT would "tell on itself." He asked what the probable outcome was of a developer buying and contracting 100s of acres of land for \$25-50,000 an acre and asking landowners to sign NDAs. With the given prompts, ChatGPT concluded that it was probably not farmland speculation, but rather a large-scale project with an anticipation of rezoning and a planned value jump after entitlement. The 200-1000 acres, strict confidentiality in site selection, massive power needs, NDAs with officials during utility and incentive talks, and payment above farmland pricing to quickly secure contiguous tracks seem to suggest a data center according to typical US trends. He ended his address by asking Council to consider putting in a measure that disallows elected officials from signing NDAs involving village business.

Abby Pennington was raised in Archbold and is a graduate of Archbold high school, a local teacher, a German township resident on County Road 21, a mother of 2 young children, and an active member of the Archbold community. Her opening statement was that she represents her own views and interests regarding data centers and not those of any school, church, or organizations she is affiliated with. She clarified that she is not anti-AI, but rather for the responsible development of the Village of Archbold, German Township, and the surrounding communities. Her goal was to present factual information to guide informed future policy decisions.

Pennington encouraged residents to take action and introduced the Citizens for Responsible Development in Fulton County, Ohio Facebook group. "We are local people

## COUNCIL MINUTES

February 16, 2026

Page 3.

doing our part and caring for each other, our land and our resources. This page is for citizens to communicate FACTUAL...information surrounding development in Fulton County, Ohio.”

Pennington shared the “Reject annexation of rural land for data center, solar fields, and wind farms” petition. It is not an official petition under Ohio Revised Code but was created to raise awareness and let local voices be heard. Although, according to Section 707.30 of the Ohio Revised Code to force a referendum vote on a zoning amendment, signatures must be collected from citizens with the subject area of the township equal to 20% of the total gubernatorial votes cast in that area in the most recent general election. To the best of their ability, they found that 2,386 votes were cast for all candidates for governor within German township and the Village of Archbold in the latest election. They would then need 478 signatures to reach 20%. If taking from German Township alone, 20% of the 602 votes would need 121 signatures. From Archbold alone, 20% of the 1,784 votes would need 357 signatures. As of 4:32 p.m., the petition had 515 signatures.

Annexation could mean that property owners have access to Archbold resources such as water and sewer, full-time police and fire protection, and more favorable zoning or development practices. Pennington warned that more research would be needed to see how this might strain current staffing and resources. She also refuted the claim that data centers can bring in more jobs and revenue for the Village with a study from the Indiana University Environmental Resilience Institute, stating that after construction, data sitters typically employ a small permanent workforce which, relative to their size and resources that they use, often results in dozens of jobs, not hundreds.

Pennington stated that per the Ohio Revised Code Chapter 5709 and the Ohio Department of Development Enterprise Zone Program through enterprise zone agreements, local governments can approve a 50 to 75% property tax abatement which typically lasts 10-15 years but can be up to 30 years. Village Administrator Aaron Alt clarified that the 10-year, 75% tax abatement for development within Archbold Village limits is for residential development. A CRA (Community Reinvestment Area) commercial tax abatement must be approved by both Four County Career Center and Archbold schools.

Pennington stated that annexation is a relatively simple process, but the reversal is very difficult. According to OhioBar.org, there is always the possibility that annexation will hurt the township’s economic growth or its continued integrity as a governmental unit. She cautioned against Statute ORC 709.024. There is an Expedited Type III petition where a property owner can pursue annexation through the state. If the state finds that annexation is required to support a major economic development, then local municipal zoning laws can be bypassed and the property annexed. No hearings or appeals can be made. She recommended people research House Bill 113 which also regards annexation and financial disclosure forms and tax exemptions.

She closed with suggestions for how to fight the Type III Annexation petition. She encouraged residents to act by joining the Citizens for Responsible Development in Fulton County, OH Facebook group, signing the change.org petition “Reject annexation of rural land for data center, solar fields, and wind farms,” contacting local and state representatives and officials, and raising awareness with yard signs. She urged Council to table discussions to give time to strengthen ordinances against noise, air, and light pollution, to make it harder and more expensive to build, and to review and rewrite the statutes to better protect our community's health and our environment. A handout was

## COUNCIL MINUTES

February 16, 2026

Page 4.

distributed with information from C4RD's research on data centers and a list of local and state representatives to contact.

Laura Bickel is a local high school biology and environmental science teacher with a major in biology, minor in geology, and master's in education. She was part of the wind team that conducted research through Green Energy Ohio to put a wind turbine on the high school campus and wrote grants to help with the project's funding. Her opening statement was that she represents the Citizens for Responsible Development in Fulton County and her personal views and interests, not those of her employment or church. Her goal was to present the environmental concerns (information detailed on the C4RD's handout) to guide informed future policy decisions to protect our natural resources and community.

Her research on water impacts showed a 1-gigawatt data center can consume 5 million gallons of water a day. Meta's 2024 sustainability report showed that all its data centers used a total of 3,078 megaliters, which equates to 813 billion gallons of water that year. A 2025 Bloomberg report showed that two-thirds of data centers built or under construction have been in regions already plagued with high water stress. Local news station drought monitors report that our area is in excessive drought. The closed loop circulation systems for cooling the servers inside data centers contain forever chemicals that end up in waterways. These systems disrupt ecosystems and harm life from the microorganism level up to humans and will directly impact our natural wetlands. Data centers are relatively new so not much is known about their effects on humans, but the chemicals being used are known to have major negative health impacts.

Air and noise pollution were two other major concerns. If the power grid fails, the backup generators that provide emergency power run on diesel. These generators are linked to releasing significant particulate matter, nitrogen, oxide, and sulfur dioxide, and carbon monoxide into the environment. Because of sporadic use, the EPA does not require pollution controls or protective measures. Data centers release decibels in the 55-85 range often on the lower frequencies and research finds this impact is detrimental to wildlife, as well as people living near them. Her closing statement was that the risks cannot be ignored. Solutions must be mindful and protect our natural resources for they are precious.

John Trudel served as the County Auditor from 1982-2002. He stated that while this is an emotional, and highly charged issue, facts and figures are needed to make things happen in Columbus. He contrasted today's situation to when North Star came to Fulton County in 1995. Back then, he felt companies were extremely transparent and upfront, holding numerous meetings to communicate with concerned residents.

Trudel discussed the importance of considering how a data center might affect the school, infrastructure, and tax base. If a data center brings in 500 people to the village, they will need housing. This will drive housing costs even higher. If the 500 employees average one child each, it would mean a 40% increase to the school's current enrollment which is around 700. This increase would require more taxes to support the school system. A data center could also put pressure on our infrastructure and resources. Roads will need to be built and maintained, sewer lines potentially connected, and massive water usage could destroy the aquifer and the surrounding wells that depend on it.

Trudel ended with encouragement for wise, transparent, and effective economic development. Economic development generally means an increase in the tax base which lowers the burden of individual property owners. He doesn't want to hinder or handcuff

## COUNCIL MINUTES

February 16, 2026

Page 5.

the economic development people, but he asked for transparency in bringing businesses and industry to the area.

Sarah Cromly lives on County Road 20 between State Route 2 and County Road F and is an attorney in Michigan. She loves this amazing community, the outdoors, and living in the country around farmland. Her goal was to ask the Council to consider tabling this discussion to consider the health, environmental, and societal effects that this possible data center could have on this community. She urged people to consider the questions she was asking to better prepare and protect our community.

Cromly questioned Councilman Gary Dominique on his signing the NDA. She asked if he had family or business ties to the project. Dominique clarified that he has business ties. Cromly then stated that he is not permitted to vote or participate in the discussion.

Cromly highlighted House Bill 15 which allows the developer of a data center to put in their own power plant. The Federal Energy Commission must issue a permit for this to be approved and connected to the grid. She asked if anyone knew it had been approved. She asked if a connection to the substation would be needed and who would be responsible for paying for the cost of upgrades. With the construction equipment coming in and out, roads and bridges would probably need redesigned. She stressed the need for answers so that we can be prepared with requiring clear understanding of financial responsibility with infrastructure and maintenance agreements. She asked if our water table could sustain an average use of 2-3 million gallons a day for cooling?

Cromly also warned against the health effects associated with data centers such as asthma, lung cancer, and miscarriages. For those within a 2-mile radius, which includes both Archbold and Pettisville schools, the health impact could be devastating. She ended her address with her love of this community and thanks for everyone working hard to preserve it.

Jim Wyse is a local, a former mayor of Archbold and currently serving as the Fulton County Economic Development Director. His goal was to reassure residents and share how NDAs are a more common practice in the economic development world. He stated that he is currently under an NDA with Iron Ridge and approximately 20 businesses throughout Fulton County. He then took questions.

Q: If there is an NDA, then can you tell us anything?

Wyse: No conversations have happened. Many businesses use NDAs to start the research process, but often nothing comes of them. Wyse

Q: What is your speculation for why they would want to pay that much for so much land?

Wyse: That rate is not uncommon anymore. North Star Steel recently bought 90 acres for approximately \$22,000 an acre with no plans for development yet.

Q: There is a lot of talk about what the land isn't being used for, but can you say anything about what it will be used for?

Wyse: There are no plans at this time.

Q: My group is for responsible development, so would you be on board with any future policy that would protect our towns from a data center?

Wyse: There are already measures in place, but I am happy to speak with anyone.

Q: You are saying that nothing is happening, but it is hard to believe. Assuming you are truthful, could you just not know?

## COUNCIL MINUTES

February 16, 2026

Page 6.

Wyse: I did sign an NDA approximately 2 weeks ago so that I and developers could talk openly, but no discussions have yet happened. If anything changes, I will be in communication with Village officials to make sure that any new development is an appropriate fit. He concluded stating that Archbold has been his home for 40 years and he would not lie to his neighbors.

Rudy Rodger is a senior at Archbold High School. He shared his generation's perspective. He noted that while high school conversations can often be weird or shallow, he and his classmates are talking about this topic. They care. From conversations at the recent senior retreat, the consensus was that they are not in favor of a data center or its negative side effects. He pleaded "Don't wreck our future and our generation for the short-term success that comes with this data center."

Cory Rufenacht disagreed with some of Jim Wyse's comments. He said that public knowledge, recorded with the state, shows that there is evidence of options being signed for \$50,000 an acre. One property has been sold with more under option.

Marty Mayor has lived in this area for about 32 years now. He moved from the city because he wanted to live in the country, raise his kids here, make friends, have a garden and listen to the cows. This is not his first development battle. A factory wanted to build an 800-foot plant near him, but with the help of an attorney and zoning laws they were able to prevent it. He emphasized having a robust zoning code so that the people do not suffer from lack of planning.

Village Administrator Alt added that the Village is actively reviewing and updating the zoning code. The Planning and Zoning Division works to build relations with the community in working with our zoning code. He joked that at least one person present has probably run into zoning issues when they wanted to place something on their property. When the public notice of reviewing the zoning code was posted, many responded with doubt, assuming the Village was working against them. That has never been the case, but Alt stressed that zoning must be right, otherwise a community could get stuck with something bad. He then listed examples of the Village shutting down developments and businesses that either would not serve the community or could actively harm it without bringing it before the community. A bitcoin mining endeavor wanted to build in what is now The Thunder Dome which would have been a major fire hazard. Another project wanted to crowd 120 homes in what they called "Cambridge Estates" behind Dogwood Court and Rosewood Court. The same developer wanted to put 48 triplexes behind Park Street where the athletic complex is slated to go.

Alt didn't deny speculation or conversations regarding data centers. Instead, he tried to reassure residents that he, the Village Engineer, and Zoning Inspector are constantly trying to stay on top of the zoning code to know what needs to be done and corrected. Zoning has a purpose and while people may not always appreciate it, the Village is working to ensure that anything that happens here is done right to maintain order and the value of our community. He and the administration care deeply for this community and work hard on its behalf.

J.J. Rupp and his family are rooted in this community and its farming and agriculture. They live just north of Archbold and are raising their family here, with 3 of

## COUNCIL MINUTES

February 16, 2026

Page 7.

their 4 children in the Archbold school district. He and his parents are local farmers with livestock and row crops in the area. He has sensed a lot of worry and fear regarding this topic and wanted to bring encouragement. He exhorted people to remember that there is only one to fear and that is God. He quoted Matthew 28 where Jesus says He is in control with authority and dominion over heaven and earth. He said it was good to have wisdom and voice concerns, but discussions need to be done with love for our neighbors and not hate. He shared that Jesus died for those who hated him like the Pharisees. J.J. then thanked those sharing facts and closed with his desire for his children to grow up in this community where we love one another and fear God not man.

Kevin Baez, tonight's sound system provider, is the newest member of Archbold's Planning Commission. He's been a member of the Archbold community since 1998 and is now choosing to raise his 2 young children here because he is just "an average Joe living in an extraordinary village." He has been attending Council meetings since last year and felt encouraged by the Council's embrace of his participation.

He challenged residents to be proactive rather than reactive, to partake more frequently in local government, not just when there is something at our doorstep. He urged people to do everything they can to prevent the data center from coming, including working with and supporting Council members, Trustees, and every level of government. He stated that communication goes two ways and encouraged people to attend Council meetings. Every first and third Monday, Council members meet to talk, but if no one else shows up, they can only talk to themselves. They cannot hear what the residents do not show up to speak. We should work together to stop the data center and in bringing the businesses and development that align with our unique and beautiful community's values. He concluded with praise of the civic workers of the Village and once again encouraged people to work with local government to get things done and ensure that our community and Earth remain the beautiful, great place that it is.

Sarah Cromly spoke again to question Village Engineer Dexter Krueger. She asked him to confirm if he had signed an NDA regarding the project. He confirmed. She asked when he signed it. He said January 28<sup>th</sup>, 2026. She asked if he had any idea of what was going to happen. He responded that he has not had any conversations since the signing. Village Administrator Alt clarified that Dexter has been released from the public records request and was fully released to disclose anything. Alt also corrected that Krueger is the Village Engineer, not the County Engineer, and therefore not an elected official.

Jesse Woods is a family man that lives one town over. He is a senior engineer and director of engineering for a large company's US branch that has a manufacturing facility in Archbold with experience with data centers building next to factories and employment needs. He contrasted local manufacturing plants and data centers, urging listeners to consider economic balances and infrastructure capacities.

Woods stated that a single facility that consumes as much electricity as 1,000 homes would strain the power grid. This would impact existing manufacturing plants, potentially causing higher costs, delayed expansions, and limits on operations. While data centers create construction jobs, they leave much fewer long-term positions compared to local manufacturing. On the same ground, a well-established company could employ hundreds of skilled workers, support suppliers, and drive real economic activity, whereas a data center

## COUNCIL MINUTES

February 16, 2026

Page 8.

would only employ a fraction of that workforce. Additionally, roads and substations would be strained and land that could support diverse industrial growth would be tied up by a single, highly specialized operation that does not integrate into the local supply chain. He concluded with a plea to prioritize developments that create long-term jobs, support existing businesses, and use shared resources responsibly.

Sherlene Cervantes moved to this area from Johnstown, Ohio, approximately 4 years ago and her concerns are not only for data centers, but other equally large industries. She shared a cautionary tale of Johnstown when an Intel plant proposed moving to the area. Johnstown used to be a beautiful small town, but changes were made quickly to support estimated growth that has yet to come to fruition. 2-lane roads became 4- or 6-lane roads; modest, but aging houses valued around \$100,000 were sold at 3-4 times that price with little to no improvements; and a new high school was built; yet the Intel plant construction keeps being delayed and is on its third owner. She ended with a statement of pride for being a citizen of Archbold and her hope that what happened to her old community does not happen to her new one.

Brooks Behnfeldt is a local, a graduate of Archbold High School, and a father to 2 young children. He cautioned people with the story of his son's diagnosis on how there are good and bad ways to react to scary and difficult situations. His son has Williams Syndrome. They received the diagnosis about a month after he was born. The doctor at Toledo Hospital shared things that were hard and terrifying to hear as a parent. Behnfeldt regrets how hateful and resentful they were towards the doctor. In their quick anger they did not return to Toledo. The reality, however, is that the Toledo doctor was right. Their current doctor in Columbus tells them the same things. Therefore, Behnfeldt challenged people to live with more love and tackle this situation the right way. He ended with encouragement to continue researching, having discussions, and advocating, but out of love for our community and not hate for our neighbors.

**COUNCIL RESPONSE:** Councilman Aaron Babcock has been on Council for 2 years. He thanked everyone for coming and echoed Baez's' invitation of residents to participate in more meetings. It is exciting and beneficial when residents get involved in person rather than on social media. Council is eager to communicate face-to-face and learn from the public.

Councilman Mike Evans just started his term on Council in January. He shares the public's concerns, especially the health risks as he too has a young family. An Ohio State Farm Bureau board member shared with him that the Farm Bureau is having a members-only educational meeting about data centers on February 26<sup>th</sup>, at 7 p.m. at the Wood County Fairgrounds. Dale Arnold, Ohio Farm Bureau director of energy policy, is the featured presenter. Tonight's concerns expand farther than Archbold. He is available to discuss this with anyone who is interested.

Councilwoman Karla Ball has been on Council for 7 years. She thanked everyone who reached out to have conversations and those praying for the community with her. Council is not having backroom discussions but rather drinking from the firehose regarding data centers just like the public. She feels the burden of trying to learn all they can to make decisions that are appropriate for the community. She urged the public to remember that

## COUNCIL MINUTES

February 16, 2026

Page 9.

the Archbold's administration are also members of this community. The only difference is that they have stepped up to serve in an official capacity. During her tenure on Council, annexation has only occurred twice. With each circumstance, Council was extremely informed and involved in the process. They took careful steps to ensure their decisions would only improve and not harm the community in any way. She has no intention of annexing so much property without concrete plans. She reiterated the invitation to Council meetings and hopes that residents continue to communicate on a partnership basis so that everyone benefits.

Councilman Chad Kern has been on Council for 6 years. His term began in this Pavilion during COVID. His greatest concern with this issue is transparency. Speculation and patterns across the US are going to raise questions and worry. Even if a data center is not being discussed, farmland is precious to this area and once it is gone, it is gone. He reassured that Council is going to do all they can to discover what is going on.

Councilman Kevin Eicher has been on Council for 18 years. This is his "second rodeo," and stated that a data center will not come to town during his term. He reiterated that Council can only discuss the information available to them, so people should continue to come and talk, ask questions, and expect the truth.

Councilman Gary Dominique has been on Council for 2 years. He has worked together with Luke Boyers on multiple projects in this community and area over the past 15 years. He signed the NDA because he trusts Boyers, that Boyers has this community's growth and advancement at heart. He then challenged the public for unhealthy speculation, asking where they were for the other large land annexations that sold at high prices in previous years. He urged them to step up and be part of a committee if the opportunity arises. He asked them to have faith in the Council and what the Village has established with the Zoning and Planning Department. He concluded with his commitment to additional development with our children, his 3 included, and their best interest in mind.

Mayor Brad Grime reiterated that there is not a lot of verified information for the Village to work with. When it does come their way, they are committed to acting on it. He also noted the commendable desire of those who addressed Council and himself to protect their beautiful property that live near the location in question. Hearing residents' voices is always important, but especially at meetings like this and annexation meetings. The Village will continue looking for economic development that is good for the community, but a data center is not one of them.

Village Administrator Alt stated that the Village will not move forward with moratorium language because of a message he received from C4RD. "It is very important to not use the word 'moratorium.' If we get one, we are playing to their hands. The Village and German Township will be sued for an injunction immediately for exclusionary zoning. We need to ask to table the issue and not make any decisions until the Village has had the time to seriously study the environmental, societal, and health impacts of undertaking a data center or any industrial. Specific guidance and points to bring up such as power generation, interconnection to the grid, redesigning roads, water use, etc."

Alt also clarified that the Village receives water from the Tiffin River, not aquifers, and the reservoirs have been ready even in the dry past 2 summers. A water study is

## COUNCIL MINUTES

February 16, 2026

Page 10.

underway. Any large development such as a data center would almost certainly require an additional reservoir. Such a major infrastructure improvement undertaking would not be on the utility bills to support, but rather an outside investor that deemed one necessary to come into this town.

Pennington and Cromly further explained that a resource in Columbus who is also advocating for farmland and small rural communities was the one to advise them to not use moratorium language until sufficient data has been collected. If they table the matter, then the Village and German Township have time to prove why a moratorium is necessary and avoid the threat of a lawsuit.

**NEW BUSINESS:** After hearing Public Participation and Council Response, Mayor Grime asked for a motion **to table the discussion and possible action** regarding direction to the Village Administrator to prepare draft moratorium legislation on data centers and advanced manufacturing **to study impacts on public health, safety, welfare, and municipal resources and infrastructure**. Chad Kern so motioned, seconded by Kevin Eicher.

Roll: Yeas: Ball, Evans, Eicher, Babcock, Kern

Abstain: Dominique

Nays: None. Motion carried.

Mayor Grime provided one last opportunity for questions before the meeting officially adjourned. One resident asked how long would they table the issue. The Mayor responded that the issue would be tabled for as long as it takes. A second asked if anyone has heard about solar farms coming. Administrator Alt shared that in German Township and other areas of the county there are farms with options for solar. Wind generation and solar are also on the Village's radar for clarifying and strengthening zoning codes and restrictions. The last question was how tabling works, the concern being how much time we had to prevent this from happening. If the issue is tabled for too long, could it give data companies opportunity to slip in? The Mayor said that data centers do move fast, but that zoning is being addressed and strengthened as quickly as possible. He ended with inviting anyone who still had questions to come and speak after the meeting adjourned.

There were no items of correspondence to review or Council Comments to record.

There being no further business to discuss, Kevin Eicher moved to adjourn the meeting, seconded by Mike Evans. All agreed; meeting adjourned.
